International Mountain Day

From the Rockies to the Swiss Alps, mountains can be some of the most breathtaking features on earth. Not only are they nice to look at, but they are also places where people can escape when they need to get away and become one with nature. Though they may not move, they are always changing, which makes them so unique.

Established in December 2003 by the United Nations General Assembly, International Mountain Day was created to bring awareness to all the things we rely on mountains for, such as all of the flora and fauna that call them home. Celebrate International Mountain Day by traveling to a mountain nearby or simply telling someone about mountains you have seen or camped in.

DID YOU KNOW?

Your Houseplants Are Screaming for Help

Neglecting to water a houseplant does more than make it wilt; it causes a noisy panic. Acoustic sensors reveal that dehydrated or injured plants like tomatoes and tobacco emit ultrasonic clicks far above human hearing. A parched tomato plant pops around 35 times an hour, loud enough for bats, mice, and moths to detect. To animals with ultrasonic hearing, a neglected greenhouse sounds less like a serene sanctuary and more like a room of people stomping on bubble wrap.
