

# RESIDENT DAILY DELIGHT

## Hostess Twinkie Day

Hostess Twinkie Day was first celebrated on April 6, 2012, on what is believed to be the anniversary of its invention. The Twinkie was invented in 1930 by James Dewar, who managed the Continental Baking Company in Chicago. He got the inspiration for the snack after seeing a billboard in St. Louis for shoes called Twinkle Toes! The treats were originally filled by hand and

made in shortbread pans. They were originally filled with banana cream, but it was changed to vanilla cream during World War II, as the short supply of bananas became an issue. The brand, represented by its iconic mascot Twinkie the Kid, has had many flavors over the years, from the classic banana to blue raspberry, orange cream, and pumpkin spice.

Twinkies have long been considered a staple in the world of American junk food. In a bizarre case, Dan White killed Mayor George Moscone and Harvey Milk in 1978 and used the infamous “Twinkie defense,” insisting that eating Twinkies and candy bars had altered his mind, making him temporarily insane and prompting him to shoot the victims!

## They Have a Shelf Life.....

Despite rumors that Twinkies will last forever, they actually have a relatively brief shelf life of 45 days. The shelf life was originally just 26 days, but the company went through some financial issues and halted production for a few months between 2012 and 2013. When they restarted production they also reformulated the recipe, adding nearly 3 weeks of additional shelf life.

## Today's Trivia

## HOW TO PLAY SUDOKU

**OBJECTIVE:** Fill a 9x9 grid so that each column, each row, and each of the nine 3x3 boxes (also called blocks or regions) contains the digits from 1 to 9.

A cell is the smallest block in the game. Rows, columns, and regions each consist of 9 cells, and the whole game consists of 81 cells. A region has thicker lines surrounding it.

The most basic strategy to find missing numbers is scanning and it consists of:

1) Crosshatching - Scan rows and columns to eliminate where a specific number can be in a given region.

2) Counting - Simply count all the different numbers in a row, column, and region that connect to one cell. If there is just one number missing, then that's what should be in the cell.

3				4	6			
	9				3	4		7
6		5			7		9	1
7	5	1	2		9			3
	2		3	7			8	
		9	6				1	2
	6		4	3	8			
5	7			9				
						9	2	4

	6	8		9				
2				4				
	3			1				7
9		4	7					
8	5		3			6		
						2	4	
			4	3	5	9	1	
6		9			8			
					1		2	8

## HINTS:

Until you've had lots of practice figuring out puzzles, here are some questions that you can ask as you play to help you to make progress:

- Where could I place the value X in this row/column/box? (Go through the numbers 1 to 9, and scan to see if the number is already in that row / column / box)
- What value could I put in this cell? (If there's just one acceptable – put it in!)
- What row / column / box is nearly full, and can I fill it?
