## World AIDS Awareness Day

In 1959, HIV/AIDS was discovered. By the 80s and 90s, it ballooned to epic proportions. Awareness and advances in medical treatment have drastically reduced the spread of this terrible disease.

HIV/AIDS deaths have declined by 68% since 2004. However, 38 million people worldwide still live with this disease in 2023. *The United Nations World Health Organization* was established in 1988 to support sufferers of HIV/AIDS by informing the public and working on a cure.

You can do your part in the fight against HIV by educating yourself, teaching others about it, and/or supporting someone afflicted with the disease. World AIDS awareness day is a reminder that we can join the fight against this horrible disease.
