World Listening Day

Take a few moments to listen to the world around you today and note what you hear. Can you hear the sound of the air conditioner? The shuffling of feet? The scratching of a pen on paper? Is someone laughing nearby? Is someone telling a story? World Listening Day celebrates acoustic ecology, the study of the relationship humans have with nature through sound.

Listening with intention is an art that requires undivided attention and needs to be practiced. Aside from simply improving listening skills, effective and active listening also sharpens your awareness of the surrounding area. There is so much to learn from the world around us when you stop and listen. You might be surprised at some of the things you hear!

Today in History

In 2008, Billy Joel performed the last of two concerts dubbed “The Last Play at Shea.” The 1964 baseball stadium was scheduled for demolition. Joel is a six-time Grammy Award winner, was inducted into the Songwriter Hall of Fame in 1992, and the Rock and Roll Hall of Fame in 1999.

DID YOU KNOW?

Seals and Motions

Despite their comfort on land and water, seals can experience motion sickness on boats due to conflicting signals from their inner ears and eyes. This discomfort is similar to what humans feel.

However, seals are well-adapted to their environments; their excellent underwater vision and sensitive whiskers enable them to detect vibrations from swimming prey, allowing even blind seals to hunt effectively. Just don't expect them to share their catch!
