Virus Appreciation Day

It may seem ironic to dedicate a day to appreciating something that can make us sick, especially given the recent outbreaks of viruses like COVID-19. Viruses are tiny parasites that contain genetic material, either DNA or RNA. Some viruses have even been used in the creation of vaccines. For example, the smallpox vaccine was developed from the cowpox virus. These infectious agents require a host, such as an animal, human, or plant, to survive and multiply.

Antiviral drugs are available to alleviate symptoms. Interestingly, all animals, including humans, harbor a large number of viruses in their intestinal tract that aid in digestion. So today, instead of fearing viruses, let's just try to understand more about them.

Today in History

In 1945, Elvis Presley performed for the 1st time at the age of 10, when he sang “Old Shep” in a youth talent contest at the Mississippi-Alabama Fair and Dairy Show in Tupelo. He won \$5.00 in fair ride tickets for finishing fifth in the competition, which was broadcast live on WELO Radio.

DID YOU KNOW?

Kangaroo Collision Course

In New South Wales, Australia, kangaroos are often involved in animal-related accidents, with collisions occurring both from direct hits and swerving to avoid them. A survey in Canberra found that 17% of car owners experienced a kangaroo collision. Kangaroo crossing signs resemble familiar wildlife warnings, but in high-collision areas, they are larger and brighter. While no official signs exist in the U.S., one prankster in North Carolina managed to create a convincing unofficial sign.
